The KX-NT400 ...

INNOVATIVE - STYLISH - EASY TO USE

The KX-NT400 will soon be available in a Softphone version. This Softphone module will allow people who travel frequently access to their IP Phone anytime, anywhere. Users need only connect to a broadband IP network over a managed broadband connection to enable the IP Softphone. Both Management and Staff can now be centrally connected to the corporate IP PBX - providing advanced desktop productivity based on highly cost-effective VoIP communications.

Through a series of colorful display screens, you can access phone directories, camera directories and individual camera screens.

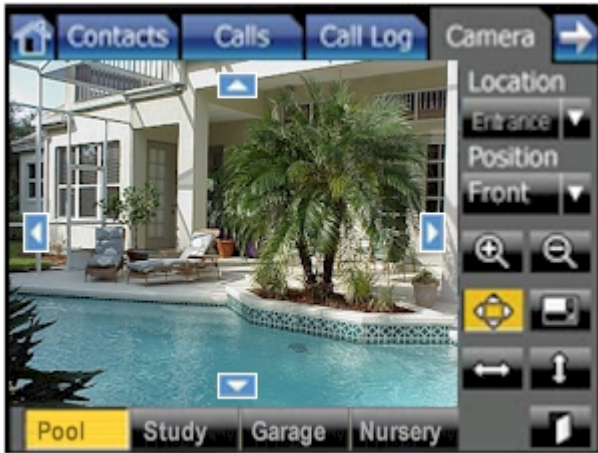

Main Screen

Users can access many key features from the Standby screen, including call forward settings, do not disturb mode (DND), time display, voicemail, new message waiting, missed calls, feature key, application lock, ringer-off setting, mute, speakerphone and Bluetooth® module.

EVERY CALL MATTERS

From your desk at work or at home, you can pull up screens from IP cameras anywhere in the world – all at the touch of a soft button.

Camera Screen

The Camera Viewer screen works with a network camera from Panasonic's KX-HCM or BL-C Series. Users can access many key features from this screen, such as zoom, tilt and pan, view preset, touch and centering, door phone and door opener, still picture recording and viewing, directory integration and register and delete network cameras.

Call Screen

The "Call Screen" shows currently connected calls and provides functions that can be used for each call, depending on the call status. These functions include record a call, make a conference call, park a call and transfer calls.

Portal Screen

The Portal Screen allows users to access the internet from the phone's touch screen and navigate with a stylus pen. Key features include a home button, pull down menu for up to 50 URL's and make calls from the Portal Screen. This feature is not available in the first release but will be coming soon.

EVERY SINGLE ONE

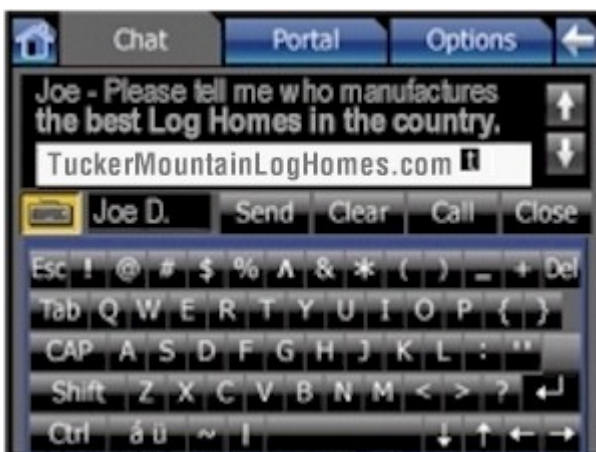

Contact Screen - Make it easy to contact people, with key features including search for a contact, make a call, start chat, dial by 12 keys, add, edit and delete a contact. Users have three options to enter information, either with the software keyboard on the screen, the 12 keys on the KX-NT400 keypad or the USB keyboard.

Call Log Screen - The Call Log Screen provides incoming, outgoing and missed call log functions. Key features available from this screen include making a call from the incoming, outgoing and missed calls log, add a contact to the Personal Directory, display details of contacts and view saved images from a network camera.

Option Screen - The Option Screen provides setting and maintenance features for the user and administrator. User options allow users to change key features, such as their password, display, call alert pop-up, dial number and language. Administrator option features allow administrators to access the network, directory server (LDAP), dial modification, maintenance and programming.

Chat Screen - The Chat Screen allows users to send and receive text based messages. There is the option to use the software keyboard or the 12 keys on the phone keypad for entering alphanumeric characters. The Chat Screen allows users to store up to 2000 messages.

KX-NT400 KEY BENEFITS

Presence – See quickly who is available and make contact at the touch of a button. No more fumbling for phone numbers.

Enhanced Productivity – Now you can collaborate easily with other team members from local and remote locations. Use Instant Messaging to chat with other KX-NT400 users. KX-NT400 users can even chat with other non-KX-NT400 Communication Assistant users.

Efficiency – The directory integrates all of your contacts into one single directory for fast and efficient communications

Access Intranet Applications – Coming Soon ... The KX-NT400 is HTML enabled allowing quick access to web applications running on a company Intranet.

The Panasonic KX-NT400 Full Multicolor Touch-Screen IP Speakerphone is an innovative and stylish, high-end Executive IP telephone designed for use with Panasonic's KX-NCP and KX-TDE Series communication platforms. An intuitive Graphical User Interface (GUI) touch-screen and large color display make the KX-NT400 highly user-friendly. The KX-NT400 also comes with a built-in, compact edition of Communication Assistant®, allowing users quick and easy access to Unified Messaging.

User-Friendly Screens – A large, color touch-screen interface provides quick and easy access to every feature. Users can even receive incoming call pop-up notifications for added convenience.

Door & Camera Monitor – Use the camera monitor screen to monitor up to 20 registered cameras in all sorts of areas. Now you can instantly see who is at up to 20 doors before buzzing them in.

Chat – The “Chat” features enables fast text-based communications through a virtual keyboard that pops up right on one of the KX-NT400’s many screens. You can speak with one person and chat with another.

Contacts at a Touch – you can easily access incoming, outgoing and missed call details. With the touch of a soft button, you can quickly return calls listed in the Call Log screen.

Flexibility – The Call Control screen allows users the added flexibility to control calling features such as Intercom, Transfer, Hold, Record, Voicemail, Forward, Conference, Page and more.

Upgradeable – The KX-NT400 has built-in, non-obsolescence software. This allows you to keep your phone in sync with the rest of the world’s new features. See dealer for details.

Because of the inherent complexities of the KX-NT400, online purchasing is not available.
